PRODUCT IDENTIFICATION & SPECIFICATIONS

Product Name:	Metoprolol Tartrate Injection USP (5mg/5mL Sterile Vial)
Batch / Lot Number:	B-API-88741
ND C Number:	00781-3044-95
Expiration Date:	08/2026

INCIDENT DETAILS & MICROSCOPY OBSERVATIONS

During pre-administration visual inspection under high-intensity polarized light in a IV compounding cleanroom, a 5mL glass vial of Metoprolol Tartrate Injection (Batch B-API-88741) was found to contain visible translucent floating fibers and dark specks.

Microscopic Examination: Microscopic examination at 40x magnification revealed two distinct contaminant populations:

- Translucent fibrous filaments approximately 1.2mm to 2.5mm in length (resembling elastomer rubber stopper shedding).
- Irregular black particulate specs (~150 to 300 microns) consistent with carbonized stainless steel or pump seal wear.

Patient Exposure: The vial was rejected prior to IV bag reconstitution. No patient was exposed to the contaminated batch.

Note on Missing Contact Info: The submitting technician opted not to provide personal contact details or hospital location on the web portal. Immediate QA investigation of Lot B-API-88741 retain samples is strongly recommended.
